

MYOH Replit Prompts - Existing Main App

Commercially sensitive - working Replit instructions - 14 May 2026

Project: Existing MYOH / Manage Your Own Household Replit app

Run this PDF only in the existing MYOH app. It adds the optional companion setup and household-level gig summary. Do not build DoorDash zone/hotspot/GPS decision logic in MYOH.

Naming rule: Use MYOH or Manage Your Own Household for the main app. Use Gig Economy Hub for the companion app. Do not use MYOHX.

Docs rule: If a prompt changes user behaviour, labels, calculations, workflows, settings, import/export or help content, update Help/Docs in the same pass.

PROMPT A - EXISTING MYOH APP: COMPANION SETUP ONLY

Add MYOH-side Gig Economy companion setup only. Run this in the existing MYOH / Manage Your Own Household Replit app. Do not rebuild or redesign the main app.

MYOH must remain the household operating system. Gig Economy Hub will be a separate companion app for operational gig-work decisions.

Requirements:

1. Add a simple Gig Economy Support enable/disable setting.
2. Let the user select providers:
 - DoorDash
 - Uber Eats
 - Menulog
 - Amazon Flex
 - Airtasker
 - Freelancer / service work
 - Other manual provider
3. For each selected provider, create a provider record with:
 - provider name
 - provider type: delivery / rideshare / parcel / tasking / freelance / other
 - status: Interested / Applying / Active / Paused / Retired
 - payment frequency
 - expected payment day
 - default tax set-aside percentage
 - default vehicle cost method
 - uses location tracking yes/no
 - uses shift tracking yes/no
 - uses journey tracking yes/no
 - feeds MYOH budget yes/no
 - notes
4. Add a simple provider summary card in MYOH showing:
 - expected weekly income
 - confirmed weekly income
 - estimated fuel/vehicle costs
 - estimated tax set-aside if used
 - estimated net household contribution
 - link/open companion app placeholder
5. Do not build detailed DoorDash zone, hotspot, map, polygon, GPS or journey decision logic inside MYOH.
6. MYOH should only receive/import household-level gig summaries later.
7. Add Help/Docs updates explaining that Gig Economy Hub is a separate companion tool and MYOH remains the household source of truth.
8. Run only necessary checks and summarise changed files/errors.

Important naming rule: do not use MYOHX anywhere. Use MYOH only.

SHARED FINAL QA / CHECKPOINT

Run a final QA pass on Gig Economy Hub and the MYOH companion setup. Do not rebuild or redesign.

Check:

- MYOH uses only MYOH / Manage Your Own Household naming, not MYOHX.
- Gig Economy Hub is clearly separate from MYOH.
- MYOH contains only companion setup and household-level gig summaries.
- Gig Economy Hub contains operational zones, hotspots, shift tracking, journey tracking and decision rules.
- Mobile layout works on a Google Pixel 9 style viewport.
- No horizontal scrolling on core screens.
- Forms are usable with large tap targets.
- Export buttons produce usable JSON/CSV for MYOH later.
- Help/Docs explain the role split.
- Any TypeScript/build errors are reported with exact file names and whether they are pre-existing or caused by this work.

Summarise:

1. What is complete.
2. What is working but manual-only.
3. What is deferred.
4. Any errors or risks.
5. Recommended next prompt.
