

MYOH Replit Work Package

Manage Your Own Household - Phase Tracker, Work Queue, and Replit Prompts

Prepared for upload into Workly / Replit documentation

How to Use This Document

- Run one Replit queue item at a time. Do not paste the entire queue into Replit at once.
- After each item, ask Replit to summarise changed files, errors, and remaining gaps.
- Do not allow Replit to rebuild, redesign, or replace the existing MYOH app unless explicitly requested.
- Current highest-priority next item: Queue Item 1 - Close Gig Work Income Linking.
- MYOH is scoped only to the household Budget and Arrears Plan. Do not include EGM/business creditors or unrelated business debts.

Current State Summary

Mobile Dashboard and Report Viewing Requirement

MYOH must be easy to view on normal modern phones, especially Gary's Google Pixel 9 and Sam's relatively new iPhone 14/iPhone 14-class device.

This is mainly a viewing/reporting requirement. Not every data-entry form needs to be perfectly phone-first immediately, but every dashboard, summary, report-style screen, and review view must be readable and usable on mobile.

Mobile views that must be prioritised:

- Main Dashboard: clear household status, income, bills, arrears, safe-to-spend, warnings, and key next actions.
- Family Budget Dashboard: clear planned vs actual, safe-to-spend, essential/flexible spend, and household status.
- Weekly Tracker: clear actual vs forecast income, bills due, arrears/rent-plan payments, essentials, shortfall/surplus, and review checklist.
- Income & Bills summary/report views: clear bill status, due dates, overdue items, paid/part-paid state, and income actual vs forecast.
- Arrears and Rent Plan views: clear dated landlord/rent payment schedule, arrears reduction target, next payment, and risk/notes.
- Scenarios summary/comparison views: readable surplus/shortfall and safe-to-spend impacts.

Gig Work has already had a dedicated mobile/OCR workflow pass, so do not spend more time on Gig Work mobile unless a regression appears.

Mobile acceptance criteria:

- No horizontal scrolling on Pixel 9 or iPhone 14-class widths.
- Report tables should collapse into stacked cards or readable summary blocks on mobile.
- Dashboard cards should use compact spacing and clear headings.
- Important warning/status information should be visible without hunting through tiny tables.

- Primary review actions should be easy to tap.
- Desktop layout should remain intact.

Area	Status	Notes
App	MYOH	Manage Your Own Household
Database/baseline	Imported	Clean household baseline imported; Weekly Tracker actual income flow still vague
Auth	Disabled for now	Single-household development mode
Settings	Scaffolded	Lookups and audit log scaffold added; wiring still gradual
Gig Work	Mostly complete	OCR, km estimator, stats, manual entry done; income linking outstanding
Shopping	Deferred	Do later after core cashflow works
Next Replit task	Queue Item 1	Close Gig Work income linking and double-count prevention

Replit Work Queue - Run One Item at a Time

Copy a single prompt from this section into Replit, wait for completion, then review the summary before proceeding to the next item.

Queue Item 1 - Close Gig Work Income Linking

Close Phase 6 only: link Gig Work payouts to Actual Income Entries. The Gig Work tab already supports manual entry, km estimator, OCR scan/review, payout type, weekly/monthly stats, and Settings lookup values. Do not rebuild or redesign.

Add a clear action on eligible gig records: "Create income entry" or "Link to income". When used, create/link an incomeEntries record with date received, source/platform, person if available, gross amount, net/profit amount, payout type/payment method, notes, and linked gig shift/reference. If already linked, do not create another income entry. Show a clear "Linked to income / Already counted" status. Dashboard and Weekly Tracker should count the incomeEntries record, not both the gig shift and income entry. Run only necessary checks and summarise changed files/errors.

Queue Item 2 - Make Actual Income Entry Obvious

Implement Phase 3 actual income entry flow only. Do not rebuild or redesign.

Keep Income Sources as forecast/expected income only. Add a clear "Actual income received" section in Income & Bills and Weekly Tracker. It must write to incomeEntries, not overwrite incomeSources. Quick-add fields: date received, income source, person, gross amount, net amount, account/payment method, allocated yes/no, tags, notes. Show actual income this week separately from forecast income. Dashboard weekly income should use actual received income entries. Keep gig-linked income from Queue Item 1 from being double-counted. Run only necessary checks and summarise changed files/errors.

Queue Item 3 - Weekly Tracker Clarity

Improve Weekly Tracker clarity only. Do not rebuild or redesign.

The user needs to quickly understand what to enter each week. Add clear sections: Forecast income, Actual income received, Bills due this week, Arrears/rent-plan payments, Essential spending, Notes/review checklist. Use the imported rent-first model: Sam wages protect rent first; Gary DoorDash/work covers bills, fuel, food and incidentals. Show actual vs planned totals and a simple surplus/shortfall. Do not change Shopping. Run only necessary checks and summarise changed files/errors.

Queue Item 4 - Family Budget Core Calculations

Implement Phase 4 Family Budget core calculations only. Do not rebuild or redesign.

Use actual incomeEntries as received income. Use incomeSources only for forecast. Show planned vs actual by budget category. Add or confirm safe-to-spend calculation: actual income received minus essential bills due, rent/arrears commitments, planned essential spending, and buffer. Show household status: Stable, Tight, Watch closely, Critical. Include weekly view first; fortnightly/monthly can be light summary if already easy. Run only necessary checks and summarise changed files/errors.

Queue Item 5 - Bills, Arrears, and Cashflow Reliability

Implement Phase 5 bills/arrears/cashflow reliability only. Do not rebuild or redesign.

Confirm bills can be added, edited, paid, part-paid, and marked overdue. Confirm arrears items can be added, edited, prioritised, and reduced by payments. Link bills and arrears to Weekly Tracker and Dashboard. Show due this week, next 7 days, and next 30 days. Show current shortfall/surplus based on actual income and due commitments. Keep the rent-first model and landlord payment plan visible where relevant. Run only necessary checks and summarise changed files/errors.

Queue Item 6 - Mobile Dashboard and Report Viewing Pass

Do a mobile dashboard/report viewing pass for MYOH. Do not redesign desktop and do not rebuild the app.

Target devices: Gary's Google Pixel 9 and Sam's iPhone 14/iPhone 14-class device. Treat this as a modern-phone responsive pass, not a single-device-only pass.

Prioritise reporting and review screens, not every input form. Gig Work has already had a dedicated mobile/OCR workflow pass, so exclude Gig Work unless a regression appears.

Required mobile priorities: Main Dashboard, Family Budget Dashboard, Weekly Tracker review view, Income & Bills summary, Arrears/Rent Plan summary, and Scenarios comparison/summary.

Ensure no horizontal scrolling; report tables collapse to stacked cards or readable blocks; dashboard cards are compact and clear; safe-to-spend, income, bills due, arrears/rent-plan payments, warnings, and household status are visible and easy to read; primary review actions are easy to tap. Keep desktop layout intact. Run only necessary checks and summarise changed files/errors.

Queue Item 7 - Settings Wiring, Light Touch Only

Wire Settings lookup values into existing dropdowns gradually, only where safe. Do not rebuild or redesign.

Start with high-value dropdowns only: Gig platform/payment status, income source type, bill category, payment method/account, task status/priority, arrears status/risk/category. Preserve existing enum values and validation. System values must stay protected. If a dropdown cannot safely use Settings yet, leave it unchanged and report why. Run only necessary checks and summarise changed files/errors.

Queue Item 8 - Export/Backup Finish

Finish Phase 9 export/backup basics only. Do not rebuild or redesign.

Confirm full JSON backup works. Add or confirm CSV exports for Family Budget, Bills, Income Sources, Actual Income Entries, Gig Work, Tasks, Arrears, Scenarios, and Budget Categories. Add an import/export history log if easy using the existing audit log. Do not add PDF summary yet unless trivial. Run only necessary checks and summarise changed files/errors.

Phase Tracker

Phase 0 - Import and Basic Run - Completed

- ☒ Import app package into Sam's Replit account
- ☒ Upload/import ZIP package
- ☒ Get app running in shared Replit app space
- ☒ Disable Clerk/login blocker for now so MYOH runs as a single-household app
- ☒ Confirm dashboard opens cleanly without login
- ☒ Confirm no Clerk keys are required for local/dev run
- ☒ Confirm all existing pages still load

Phase 1 - Stability, Routing, and Branding - Completed

- ☒ Dashboard routing works for /dashboard and/or /
- ☒ Old labels replaced with MYOH where appropriate
- ☒ Navigation contains all core MYOH sections
- ☒ Mobile header branding says MYOH
- ☒ Minimal checks completed and no remaining Phase 1 risks recorded

Phase 2 - Core Data Setup, JSON Import, and Real Starting Data - Mostly complete - Weekly Tracker needs refinement

- ☐ Database treated as empty before baseline import
- ☐ JSON import/export supports full-app backup and targeted section import/export
- ☐ Import preview and modes supported: merge/update, add new only, skip duplicates, replace selected section
- ☐ dueDate supported for one-off bills while dueDay remains for recurring bills
- ☐ Clean household baseline imported
- ☐ SA Water invoice included: \$201.96 due 2026-03-30
- ☐ Weekly Tracker actual income entry is still too vague and needs refinement

Phase 3 - Actual Income Entries - Not started

- ☐ Keep Income Sources as forecast/expected income only
- ☐ Add clear Actual Income Entries section
- ☐ Add quick-add actual income received
- ☐ Track date received, source, person, gross/net amount, account, allocated status, tags, and notes
- ☐ Update dashboard weekly income to use actual received income entries
- ☐ Show expected income separately as forecast
- ☐ Avoid double-counting linked gig income

Phase 4 - Family Budget Core - Not started

- ☐ Use actual received income
- ☐ Add planned vs actual spending by category
- ☐ Add safe-to-spend calculation
- ☐ Add weekly first; fortnightly/monthly summaries if practical
- ☐ Include essentials, flexible spending, arrears, groceries, and emergency buffer
- ☐ Show household status: Stable, Tight, Watch closely, Critical

Phase 5 - Bills, Arrears, and Weekly Cashflow - Not started

- ☐ Bills can be added, edited, paid, part-paid, and marked overdue
- ☐ Arrears items can be added, edited, prioritised, and reduced by payments
- ☐ Link bills and arrears to Weekly Tracker
- ☐ Show due this week / next 7 days / next 30 days
- ☐ Show current shortfall or surplus
- ☐ Support practical catch-up planning

Phase 6 - Gig Work / DoorDash - Mostly complete - income linking outstanding

- ☐ Gig Work tab improved
- ☐ DoorDash/App Script-style workflow replicated where useful
- ☐ Kilometre/km estimator added
- ☐ Frontend OCR scanner added
- ☐ Tracks platform, date, person, hours, gross earnings, fees, expenses, distance/km, zone/suburb, orders, notes, net pay, and profit
- ☐ Payout type supported: Weekly Deposit, FastPay, Cash
- ☐ Scan-then-review OCR workflow added
- ☐ Settings integration for gig platforms and payment statuses added
- ☐ Still needed: link received gig payments to Actual Income Entries
- ☐ Still needed: avoid double counting between gig payouts and income entries

Phase 7 - Task Management - Not started

- ☐ Replace simple on/off tasks with task statuses
- ☐ Add statuses: Not started, In progress, Waiting, Done, Deferred, Cancelled
- ☐ Add priority: Low, Medium, High, Critical
- ☐ Add due dates, assigned person, category, notes, completion date
- ☐ Link tasks to bills, arrears, income, gig work, scenarios, and later shopping
- ☐ Add views: Today, This week, Overdue, By person, By status, By category

Phase 8 - Scenarios - Not started

- ☐ Improve Scenarios tab
- ☐ Create scenario from current budget
- ☐ Model income changes, bill delays, grocery changes, arrears changes, and gig income changes
- ☐ Show weekly surplus/shortfall
- ☐ Show safe-to-spend impact
- ☐ Compare scenarios
- ☐ Apply scenario to live plan only after confirmation

Phase 9 - Exports and Backup - Not started

- ☐ Export Family Budget CSV
- ☐ Export Bills CSV
- ☐ Export Income Sources CSV
- ☐ Export Actual Income Entries CSV
- ☐ Export Gig Work CSV
- ☐ Export Tasks CSV
- ☐ Export Scenarios CSV
- ☐ Export full backup JSON
- ☐ Add PDF summary later if practical

Phase 10 - Shopping Tab / Household Supplies - Deferred

- ☐ Improve Shopping tab as master shopping list
- ☐ Add weekly shopping list workflow
- ☐ Group items by Aldi, Woolworths, Heart and Soul/local, Buy where best, Household supplies, Other
- ☐ Add estimated vs actual totals
- ☐ Link shopping spend to Family Budget categories
- ☐ Add bought/not bought and needed-this-week toggles
- ☐ Add copy-last-week or start-new-weekly-list option if practical
- ☐ Add shopping CSV export

Phase 11 - Settings, Controlled Lists, Audit Log, and User Controls - Mostly complete - wiring outstanding

- ☐ Settings section/tab added
- ☐ Controlled dropdown scaffolding complete, not yet wired into all feature dropdowns
- ☐ Income source type, bill category, budget group, arrears, task, gig, payment method, household people settings added

- [] Audit log scaffolding added
- [] System-required enum values protected from accidental deletion
- [] Still needed: default weekly budget assumptions
- [] Still needed: import/export history log
- [] Still needed later: user/role controls when auth returns

Phase 12 - Data Safety and Auth Revisit - Deferred

- [] Decide whether MYOH remains single-household or supports multiple users
- [] Add userId or householdId scoping before real sensitive data is entered
- [] Reintroduce Clerk or another login method when core app is stable
- [] Add Google login if still wanted
- [] Test data isolation between users/households
- [] Document environment variables and setup steps

Save Point - 2026-05-13

- Save point created after Phase 2 import/export and dueDate work.
- Current clean baseline file: MYOH-clean-baseline-empty-db-v4.json.
- Database was assumed empty before baseline import; user later confirmed baseline imported.
- Scope locked to household Budget and Arrears Plan only.
- Shopping intentionally deferred until later phase.

Scope Rules / Decisions

- Settings should control dropdown values wherever practical, so users can add/update household-specific values without code changes.
- Audit logging should be added before reintroducing multi-user/auth so later user actions can be tracked cleanly.
- MYOH data must stay scoped to the Budget and Arrears Plan project only.
- Do not include EGM/business creditors, business debts, or unrelated Brighter Group items unless explicitly requested.
- Clerk/login has been disabled for now to reduce setup friction and credits.
- MYOH is currently treated as a single-household development app.
- Do not enter sensitive real household data until auth/data scoping is added back.
- Replit prompts should stay short and phase-based to preserve credits.
